# ABOUT FIRST QUANTUM

First Quantum Minerals Ltd. (“**First Quantum**” or the “**Company**”) is a global mining company primarily producing copper and nickel, with secondary production in gold and silver. Our principal activities include mineral exploration, mine engineering and construction, and mining operations. First Quantum is committed to extracting resources responsibly and sustainably and is focused on making a long lasting positive impact in the communities in which it operates.

Beginning with the 1996 purchase of a mining licence in Zambia to reprocess tailings from past mining activities, First Quantum has grown to be one of the world’s top 10 copper producers. Today, our assets and operations span nine countries across five continents. Our operations are currently located in Zambia, Panama, Australia, Mauritania, Spain, Turkey and Finland. We also have advanced exploration projects in Argentina and Peru.

Our projects are summarized on the next page.

## OPERATING PROJECTS

Name of project	Ownership interest	Location	Project description
<b>Kansanshi</b>	80%	<b>Zambia</b>	The Kansanshi copper-gold mine in Zambia has been our flagship operation since 2005. Since we started production at Kansanshi opening in 2005, we have installed several expansions, and the operation is now capable of producing up to 200,000 tonnes of copper and more than 120,000 ounces of gold per year. Once the S3 expansion is completed, copper production from Kansanshi is expected to average approximately 250,000 tonnes per annum for the remaining life of mine to 2044.
<b>Sentinel</b>	100%	<b>Zambia</b>	Constructed over four years from 2012, Sentinel represents US\$2.1 billion of investment - Zambia's largest infrastructure investment since the Kariba Dam was constructed in 1959. The plant has capacity to treat 62 million tonnes of ore to produce 270,000 to 300,000 tonnes of copper per annum. At planned throughput rates the remaining life of mine is approximately 13 years.
<b>Cobre Panama</b>	90%	<b>Panama</b>	With 3 billion tonnes of proven and probable reserves, Cobre Panama is one of the largest new copper mines opened globally in the past decade. Commercial production started in 2019. In 2021 the plant produced 331,000 tonnes of copper, along with gold, silver and molybdenum. Expansion of the process plant facilities and related infrastructure is underway to support a 100 Mtpa throughput with copper production ramping up to 400,000 tonnes per annum. As at the end of December 2021, the remaining mine life is 34 years.
<b>Ravensthorpe</b>	70%	<b>Australia</b>	The Ravensthorpe project is an open-pit nickel mine and primary processing plant located in Western Australia. Ravensthorpe achieved commercial production in December 2011. Its operations was expanded by mining activities commencing at Shoemaker-Levy in 2021. The mine is estimated to have a remaining life of 19 years. Production in the first five years is expected to be an average of 30,000 tonnes of nickel per annum.
<b>Guelb Moghrein</b>	100%	<b>Mauritania</b>	Guelb Moghrein is one of the biggest external investments in Mauritania. A final cutback of the main pit was approved and commenced in 2021. The remaining life of mine is currently 3-4 years.
<b>Las Cruces</b>	100%	<b>Spain</b>	Las Cruces is a high grade open-pit copper mine and hydrometallurgical plant located in Southern Spain. Mining of the secondary orebody in the open pit was completed in August 2020. In 2022 the work will mainly be focused on rehabilitation activities and mining the tailings installation. The Las Cruces underground project is awaiting board approval, which is not expected until early 2023.
<b>Çayeli</b>	100%	<b>Turkey</b>	The Çayeli mine is an underground copper and zinc operation in north eastern Turkey. Since 1994, Çayeli has produced copper and zinc concentrates. It has the capacity to mine and process 1.3 million tonnes of ore per annum. At currently projected processing throughput rates, the remaining life of mine is expected to be 4 years.
<b>Pyhäsalmi</b>	100%	<b>Finland</b>	The Pyhäsalmi mine is an underground copper, zinc and pyrite mine located in central Finland. The project has reached the end of its mine life. Mine closure plans, including dismantling and earthworks, are being planned in accordance with legal requirements and best practice. Production of pyrite will continue until 2027, based on reclaiming pyrite from tailings.

Note: First Quantum Mining and Operations Limited ("FQMO") is engaged in providing mining services to the Kansanshi and Sentinel projects in Zambia. FQMO by itself is not a party to a mining license. Since FQMO provides services to both projects in Zambia, it is reported as the FQMO project in this report as if it was its own project.

## DEVELOPMENT AND EXPLORATION PROJECTS

Name of project	Ownership interest	Location	Project description
<b>Enterprise</b>	100%	<b>Zambia</b>	Enterprise is a stand-alone nickel orebody in the south-west of the Trident license area. When fully operational, Enterprise is expected to produce an average of 30,000 tonnes of nickel in high-grade concentrate per year over an 11-year mine life.
<b>Taca Taca</b>	100%	<b>Argentina</b>	Taca Taca is a high-potential copper-gold-molybdenum porphyry deposit in an advanced exploration phase. The recovered copper is expected to reach a peak of approximately 275,000 tonnes within the first ten years of operations. Once constructed, the project is estimated to have a mine life of 32 years.
<b>Haquira</b>	100%	<b>Peru</b>	Haquira is one of the world's major undeveloped copper deposits with excellent potential for a large-scale copper mine. When fully operational, the Haquira Project has the potential to produce more than 200,000 tonnes of copper a year.

# ABOUT THIS REPORT

First Quantum makes significant contributions to the public finances of the countries in which we operate. We strongly support the various transparency initiatives which provide all stakeholders with clear information of the contributions which First Quantum makes to our host governments. The 2021 Tax Transparency and Contributions to Government Report highlights First Quantum's contributions to our host Governments which helps to illustrate the positive impact we strive to create everywhere we do business.

This report is intended to meet Canada's Extractive Sector Transparency Measures Act ("ESTMA") reporting obligations as well as Chapter 10 of the EU Accounting Directive as noted in Appendix A of this report. All amounts in this report are expressed in U.S. dollars unless otherwise noted.

# MESSAGE FROM OUR CHIEF FINANCIAL OFFICER

On behalf of the Board, I am pleased to present First Quantum’s *Tax Transparency and Contributions to Government Report for 2021*.

**Hannes Meyer**  
Chief Financial Officer

This report has been prepared in accordance with Canada’s *Extractive Sector Transparency Measures Act* (“**ESTMA**”) and Chapter 10 of the *EU Accounting Directive*, and is intended to provide transparency in relation to First Quantum’s tax and economic contributions made in the countries that we operate.

The global COVID-19 pandemic continued to present challenges in 2021. We remain committed to providing support for our local communities and governments during these challenging times. First Quantum has been very active in supporting government of our host countries with supplies and emergency livelihood packages into surrounding communities. The Company also provided testing and medical equipment and assisted with the construction of COVID-19 isolation facilities for the community.

↑ 44%  
**\$1.56bn**  
TOTAL DIRECT CONTRIBUTIONS  
TO GOVERNMENTS

We also launched initiatives to support the government in providing improved access to essential health services to the communities around our mines through schools and health facilities, as we seek to improve the health of our host communities.

Despite the ongoing challenges of the global pandemic, record annual copper production was achieved during the year ended December 31, 2021, with total copper production at 816,435 tonnes, representing a 5% annual increase from the prior year. The record achievement was mainly attributable to the strong operational performance at Cobre Panama, which more than offset the production decreases seen at Sentinel, Kansanshi and other sites.

Cobre Panama had several milestone achievements during the year, leading up to a record annual copper production of 331,000 tonnes for the year, up 61% from 2020. Copper production at our Zambian sites, Sentinel and Kansanshi, saw an annual decline of 7% and 9%, respectively, compared to the prior year. Kansanshi achieved copper production of 202,159 tonnes in 2021, 19,328 tonnes lower than prior year due to lower grades as well as throughput. At Sentinel, copper

production for the year was 232,688 tonnes, 18,528 tonnes lower than prior year due to lower grades. All our other operations performed to expectations, achieving consolidated copper production of 50,588 tonnes for the full year.

Our record annual copper production coupled with the benefit from continued strong copper prices has enabled us to make significantly higher direct contributions to governments of \$1.56 billion, an increase of 44% on 2020.

In 2021, our contributions under ESTMA reporting amounted to \$920 million, an increase of more than 78% when compared to 2020. The increased contributions are mostly attributable to record-breaking production at Cobre Panama and strong contribution from Kansanshi and Sentinel, and overall higher commodity prices.

In addition to the \$920 million ESTMA reportable payments, we also report payments in respect of consumption and import taxes, payroll taxes, withholding taxes, CSR and infrastructure that are outside the scope of ESTMA reporting. In 2021, our additional reported payments totalled \$643.6 million, which includes \$72.1 million in tax payments made to the Zambian and Turkish governments via offset of VAT refundable. Also included are Zambian VAT payments of \$240.3 million, the refund of which has been significantly delayed and not refunded in 2021.

We, at First Quantum, remain committed to conducting our operations in a transparent and responsible manner that complies with our legal and regulatory obligations and responsibilities to our communities across the world.

<sup>1</sup> Relates to payments reportable under ESTMA.

<sup>2</sup> Includes employer and employee burden.

<sup>3</sup> This figure only includes VAT that is non-refundable and import taxes, except for Zambia where the amount also includes \$240.3m refundable VAT remitted in 2021 and pending repayment. The Company's Zambian operations have continued to accrue VAT receivable amounts with minimal cash refunds received or offsets to other tax liabilities approved. The inclusion of the 2021 VAT in Zambia reflects the risk that VAT repayments owed to the Company have been significantly delayed.

<sup>4</sup> This figure includes CSR directly to communities and infrastructure improvement payments where the primary user is the Company.

<sup>5</sup> Taxes are reported net of credits, offsets or refunds. The taxes (including corporate income taxes, payroll taxes, VAT, withholding taxes and customs) paid by way of offsetting VAT refunds owing to the Company are presented separately to illustrate non-cash contributions. The offsets received in relation to the Company's Zambian operations relate to VAT refunds outstanding from prior years.

<sup>6</sup> The \$37.9 million other ESTMA payments is comprised of \$1.1 million ESTMA reportable donations paid to various payees, and dividends of \$36.8 million paid to ZCCM Investments Holdings Plc (a company majority owned by the Republic of Zambia).

Kansanshi has been our flagship operation since 2005, located near Solwezi, in the North Western Province of Zambia. Kansanshi employs almost 5,000 people, primarily Zambians, and utilizes state-of-the-art technology to extract copper and gold from three different ore types with a 23-year remaining mine life.

Sentinel achieved commercial production in 2016, located 150 km west of Solwezi. Sentinel represents US\$2.1 billion of investment – Zambia’s largest infrastructure investment since the Kariba Dam was constructed in 1959. The operation is based on sophisticated technology – including the world’s largest steel-ball mills and the world’s largest semi-mobile rope shovels. Sentinel employs more than

6,000 people, primarily Zambians, with a 13-year remaining mine life.

Enterprise nickel project is located 12 km away from our Sentinel copper mine. The project benefits from close proximity and synergies with Sentinel. The nickel process plant was completed in 2016 and is integrated with the Sentinel copper circuit so that it can produce additional copper concentrate when not producing nickel. Collectively, the Sentinel Mine and the Enterprise development project (when constructed) is referred to as the “Trident Project”. The Enterprise project is a low-cost, high-grade nickel sulphide project with projected annual nickel production of 30 thousand tonnes over an 11-year mine life. It is expected that the project will come online in 2023. Subject to Board approval to develop,

this project will place First Quantum as a top 10 global nickel producer.

In the year the Company has supported various programs in Zambia including, but not limited to:

- **Conservation farming** – teach nearly 40,000 local farmers basic business principles and their application to high-value crop farming as a sustainable source of income.
- **School meals** – providing daily meals to 7,700 undernourished schoolchildren leading to improve attention spans and on average 30% gain in academic performance.
- **West Lunga Conservation Project** – invested \$5 million towards conservation and wildlife activities and supports up to 50 endemic plant species.

# OUR 2021 SOCIAL CONTRIBUTIONS – PANAMA

TRAINING CENTER

Cobre Panama is our newest operation, located in Colon Province, 120 km west of Panama City. Cobre Panama employs more than 7,000 people, primarily Panamanians, and utilize state-of-the-art technology and infrastructure to extract copper with world-class efficiency with a 34-year remaining mine life. Cobre Panama achieved commercial production in 2019 and cost \$6.7 billion to construct, representing the largest investment in Panama since the Panama Canal.

In the year the Company has supported various programs in Panama including, but not limited to:

- **Gorgas Memorial Institute** – sponsored the medical research institution that has been dedicated for more than 80 years on investigating diseases in the tropics and preventative

medicine. In April 2021, the Gorgas COVID-19 Institute was opened and now provides advanced genetic sequencing of coronavirus samples to help track its mutation and spread in the country.

- **The Association of Donoso and La Pintada Producers (DONLAP)** – purchased \$2 million of produce from DONLAP, made up of nearly 200 local farmers and several dozen small groups.
- **Training** – invested \$4.3 million to construct the Industrial Professions Training Center of Cobre Panama. Currently training 40 students of which 30% are women. First Quantum provides tuition, transportation and a monthly stipend.
- **Reforestation Plan** – committed to reforestation of 10,475 hectare (7,375 hectare outside the mine footprint and 3,100 within the mine footprint).

#### Additional Notes

1. Above numbers are reported in USD. When a payment is made in a foreign currency by a subsidiary which uses USD as its accounting functional currency, the payment is generally reported using the exchange rate existing at the time the payment is made. For those subsidiaries whose accounting functional currency is their local currency, payments reported have been translated to USD using the yearly average exchange rates which are as follows:

Currency	USD
Argentine peso	95.1015
Chilean peso	760.2530
Euro	0.8454

2. The Company reported all payments in excess of USD \$78,877 (CAD \$100,000/1.2678 year-end exchange rate) per payee per category.

3. Infrastructure improvement payments include in-kind contributions. The method for calculating the value of the payments is at cost.

<sup>1</sup> Enter the proper name of the Payee receiving the money (i.e. the municipality of x, the province of y, national government of z).

<sup>2</sup> Optional field.

<sup>3</sup> When payments are made in-kind, the notes field must highlight which payment includes in-kind contributions and the method for calculating the value of the payment.

<sup>4</sup> Any payments made in currencies other than the report currency must be identified. The Reporting Entity may use the Additional notes row or the Notes column to identify any payments that are converted, along with the exchange rate and primary method used for currency conversions.

<sup>3</sup> Infrastructure improvement payments include in-kind contributions. The method for calculating the value of the payments is at cost.

<sup>1</sup> Enter the project that the payment is attributed to. Some payments may not be attributable to a specific project, and do not need to be disclosed in the "Payments by Project" table.

<sup>2</sup> When payments are made in-kind, the notes field must highlight which payment includes in-kind contributions and the method for calculating the value of the payment.

<sup>3</sup> Any payments made in currencies other than the report currency must be identified. The Reporting Entity may use the "Additional Notes" row or the "Notes" column to identify any payments that are converted, along with the exchange rate and primary method used for currency conversions.

# BASIS OF REPORT

This report has been prepared as required by ESTMA and EU Transparency and Accounting Directive with respect to disclosure of Payments to Governments, along with voluntary additional reporting of contributions relating to payroll tax, consumption tax and social contributions.

Taxes, royalties and other payments to governments are presented on a cash-paid basis during the reporting period. In-kind payments are converted into monetary value at the date of settlement. The report includes all such payments for activities which relate to exploration, discovery, development and extraction of minerals for each of our projects.

Disclosure threshold – payments to the “same payee” that meet or exceed CAD \$100,000 in one category of payment are disclosed.

First Quantum Minerals Ltd., as parent of the group, reports the activity of any of its subsidiary undertakings that are active in the extractive industry. Unless noted otherwise in the report, the following terms have the meanings noted below:

## Payee

For the purposes of ESTMA, a payee is:

- Any government in Canada or in a foreign state;
- A body that is established by two or more governments; or
- Any trust, board, commission, corporation or body or other authority that is established to exercise or perform, or that exercises or performs, a power, duty or function of a government for a government referred to in paragraph (a) above or a body referred to in paragraph (b) above.

Payees include governments at any level, including national, regional, state, provincial, local or municipal levels.

Payees may include non-governmental entities if the benefit bestowed would have otherwise been provided by the government. Payees also include any government-owned or government-controlled entities that exercise or perform a power, duty or function of government.

Aboriginal and Indigenous groups/ organizations that exercise or perform the

power, duty, or function of a government may also be regarded as a payee under the Act. Payments to foreign and Canadian Aboriginal governments are reported.

For the purpose of this report, the term “government” should be applied broadly to capture the various scenarios referred above.

## Project

A “project” means the operational activities are governed by a single contract, licence, lease, concession or similar legal agreement that forms the basis for a payment liability with a payee. If multiple such agreements are substantially interconnected, they would be considered a single project. “Substantially interconnected” means

forming a set of operationally and geographically integrated contracts, licences, leases or concessions or related agreements with substantially similar terms that are signed with a government and give rise to payment liabilities.

## Taxes

Taxes include corporate income taxes, resource taxes, property taxes, withholding taxes on cross-border dividends, and other levied taxes, excluding consumption and personal income taxes. Corporate income and resource taxes are payments to governments based on income, profits or production under legislated income tax rules in relation to the commercial development of minerals.

## Royalties

Royalties are paid to governments in relation to the rights to extract mining resources.

## Fees

Fees are amounts levied on the initial or ongoing right to use a geographical area for commercial development of minerals. Fees include licence fees, permit fees, entry fees, regulatory charges and other payments for licences and/or concessions. Amounts paid for goods and services in the ordinary course of commercial transactions are excluded.

## Production Entitlements

Production entitlements are a payee's share of mineral production under a production sharing agreement or similar contractual or legislated arrangement. The Company does not currently pay any production entitlements.

## Bonuses

Bonuses are payments to governments (including aboriginal and indigenous

groups) for signing, discovery, production and any other type of bonus paid in relation to commercial development of minerals. The Company reports cash donations and in-kind donations relating to CSR under this category.

## Dividends

Dividends are payments to governments or entities owned by government with an ownership interest in the Company's subsidiaries, excluding payments to governments that are ordinary shareholders of the Company or its subsidiaries. The Company reports dividends to ZCCM Investments Holdings Plc as it is a company majority owned by the Republic of Zambia.

## Infrastructure Improvements

Infrastructure improvements are payments for the construction of infrastructure such as public roads, libraries and hospital facilities, excluding payments made in circumstances where the infrastructure is expected to be primarily used for mine operational purposes.
